CERTIFICATE

This is to certify to that Mr. THATIKANTI ROHITH, bearing Roll No. 160123737311 of the degree of Batchelor of Engineering in Information Technology in Chaitanya Bharathi Institute of Technology (Autonomous) entitled "FOOD DELIVERY APP" is a Bonafide record of internship work carried out under my supervision. The contents of this report, in full or in parts, have not been submitted to any other Institution or University for the award of any degree.

Mentor	Head of the Department
K. Swathi	Dr. M. Venu Gopalachari
Assistant Professor	
Dept. of IT	
CBIT, Hyderabad.	

DECLARATION

I am declaring that this project report titled “FOOD DELIVERY APP” Information Technology is a record and has not formed the basis for the award of any other degree in this or any other Institution or University. In keeping with the ethical practice in reporting scientific information, due acknowledgements have been made wherever the findings of others have been cited.

THATIKANTI ROHITH

ACKNOWLEDGEMENT

I would like to express my gratitude to all the people behind the screen who helped me to transform an idea into a real Application. I would like to express my heart-felt gratitude to my parents without whom I would not have been privileged to achieve and full fill my dreams. I am grateful to our principal Sri Prof. C. V. NARASIMHULU (Ph. D.) who most ably run the institution and has had the major hand in enabling me to do my project.

I am very thankful to Dr. M VENU GOPALACHARI, (PhD) Head-Dept. of Civil engineering, for encouragement and providing support and assistance for the duration of the thesis.

I profoundly thank , K . SWATHI (Assistant Professor)who has been an excellent Guide and also a great source of inspiration to my work.

I am also grateful to my parents, family and friends for the support and encouragement in completing my case study successfully.

Finally, I acknowledge all those who have helped me directly or indirectly for the completion of dissertation work.

Company Logo / information

About: Codec Technologies is a leading IT training and software development organization dedicated to delivering high-quality technical education and industry-oriented skill development programs. The company specializes in cutting-edge technologies including software development, UI/UX design, full-stack development, cloud computing, cybersecurity, and data analytics. With a strong focus on practical and project-based learning, Codec Technologies bridges the gap between academic knowledge and industry requirements. The organization is committed to empowering students and professionals with the skills needed to excel in the rapidly evolving technology world.

Mission: To provide high-quality, industry-driven technical education through structured training programs, hands-on projects, and innovative learning techniques enabling students to enhance their skills, stay future-ready, and succeed in the global IT ecosystem.

Vision: To become a nationally recognized centre of excellence in technical training and software development by fostering innovation, promoting digital skills, and building a skilled workforce aligned with modern industry standards and emerging technologies.
Approach: Codec Technologies follows a systematic, practical, and learner-centric methodology:

- Designing industry-relevant training curriculum
- Offering hands-on learning through real-time projects
- Providing internships to gain practical experience
- Ensuring continuous mentor support and doubt resolution
- Conducting assessments to track student progress
- Encouraging innovation, problem-solving, and research
- Building strong industry-academia connections for placements and internships

OFFER LETTER

CODEC TECHNOLOGIES

INTERNSHIP OFFER LETTER

Dear Thatikanti Rohith,

We are pleased to offer you a 2 Month Internship as Project Intern at Codec Technologies, a global platform dedicated to empowering learners and connecting diverse talent to create meaningful career opportunities worldwide. Codec Technologies delivers dedicated IT and business consultancy services across more than 27 countries, empowering global innovation and strategic growth.

Internship Details:

- Designation : UI/UX Designer Intern
- Location : Hybrid / India
- Duration : 29/06/2025 to 29/08/2025
- Reporting to : Assigned Project Head(s)

This program provides an immersive experience, enabling you to gain industry-level knowledge and acquire valuable skills. Exceptional interns may also qualify for a scholarship award based on weekly performance reviews conducted by Project Heads.

If you accept this offer and the terms above, please complete your assigned projects and training tasks on our platform and via email.
Best regards,

Sincerely,
Dr. Anurag Shrivastava,
Codec Technologies India
NCS ID: E19E86-0116588288923

1. ABSTRACT

This project presents the UI/UX design and front-end implementation of a modern, user-friendly Food Delivery Application inspired by leading platforms such as Swiggy and Zomato. The primary objective of the project is to create a clean, intuitive, and mobile-first interface that enhances user experience from browsing restaurants to placing and tracking food orders. The design emphasizes simplicity, responsiveness, and seamless interaction across all screens, ensuring that users can easily navigate through the application without confusion or delay. The project follows a structured UI/UX design workflow, including user research, wireframing, prototyping, and component-based design development. Each screen has been carefully crafted using modern technologies such as React, TypeScript, Tailwind CSS, and shadcn/ui, enabling a consistent and visually appealing layout. The app includes key features like restaurant listings, menu display, search functionality, cart management, order tracking, and multiple payment options. Interactive elements are designed with attention to colour balance, spacing, typography, and accessibility to provide a smooth user journey. Additionally, performance optimization techniques such as component reusability, lazy loading, and image compression were implemented to ensure fast loading across devices. The project also explores UX best practices including user flow optimization, efficient navigation structure, and responsive behaviour for mobile, tablet, and desktop screens. Through this internship project, significant improvements were made in understanding modern UI/UX design principles, component architecture, and front-end development workflows. This work lays a strong foundation for integrating backend features in the future, such as user authentication, real-time order tracking, admin dashboards, and payment gateways. Overall, the project demonstrates a comprehensive, professional, and scalable UI/UX design suitable for real-world food delivery platforms.

Keywords: Food Delivery App, UI/UX Design, React, TypeScript, Tailwind CSS, User Interface, User Experience, Mobile-First Design, Wireframing, Prototyping, Frontend Development, Responsive Design, Order Tracking, Cart Management, Modern Web Design.

2. Organization Information:

Name of the Organization: Codec Technologies

Internship Role: Designer Intern (UI/UX Designer)

Duration of the Internship: 29/06/2025 to 29/08/2025 (2 months)

Brief Description About the Organization

Codec Technologies is a growing and innovative IT training and software development organization that specializes in delivering high-quality technical education and hands-on project experience to students and professionals. The company is committed to empowering learners by offering real-world exposure in the latest and emerging technologies. Codec Technologies provides structured, practical, and project-based internship programs designed to develop strong technical foundations and employability skills.

The organization focuses on bridging the gap between academic learning and industry expectations by offering well-designed training modules, mentor-led guidance, real-time project experience, and personalized feedback. Through its industry-relevant curriculum, Codec Technologies ensures that learners gain the knowledge and expertise required to perform effectively in a competitive global technology environment.

Codec Technologies creates a supportive and accessible learning ecosystem that encourages innovation, creativity, and professional growth. By offering opportunities to work on real projects and modern tools, the organization helps interns build strong portfolios and gain confidence in their technical and design abilities.

Domains Offered by Codec Technologies:

- Data Science & Analytics
- Machine Learning
- Full Stack Web Development
- Cyber Security
- Blockchain & Crypto
- Prompt Engineering
- UI/UX Designing
- Artificial Intelligence
- Cloud Computing

3. INTRODUCTION

In the digital world, UI/UX design has become essential for building successful applications, especially in the food delivery industry. A well-designed food delivery app ensures that users can browse dishes, place orders, make payments, and track delivery easily without confusion.

Food delivery companies face several UI/UX-related challenges that affect user satisfaction and business performance. Smooth user experience helps increase customer retention, reduce app abandonment, and improve order frequency.

3.1 Identified Problems

1. Difficult Navigation and Information Overload

   Users often find it confusing to browse menus, explore restaurants, or find the right dish due to cluttered layout and too many options.

2. Poor Personalization

   Apps fail to show food recommendations based on past orders, preferences, or location.

3. Inconsistent Design Patterns

   Non-standard buttons, uneven spacing, and unclear icons reduce usability and make the app look unprofessional.

4. Complicated Checkout Flow

   Multiple steps during checkout irritate users and increase cart abandonment.

3.2 Proposed Solutions

To solve the above problems, the following UI/UX solutions are proposed:

- Clean & Minimal UI
- Use clear icons, proper spacing, and simple navigation.
- User-Centered UX Flow
- Fewer steps from search → select → order → pay.
- Smooth, fast checkout process.
- Personalized Home Screen
- Show recommended dishes.
- Highlight nearby restaurants and popular cuisines.
- Interactive Prototype
- Design wireframes using Figma.
- Build a clickable prototype to test user behavior.
- Visual Hierarchy & Consistent Design System
- Use a proper color palette, typography, and UI components.

- Usability Testing
- Collect user feedback to improve the design.

4. SOFTWARE REQUIREMENTS

The following tools were used during the UI/UX internship:

Design & Prototyping Tools

- Figma – Main tool for creating wireframes, UI designs, and prototypes.
- Adobe XD – Optional design platform for creating layouts.
- Sketch – macOS-based tool (used if needed for vector-based interface design).

Graphic Tools

- Adobe Illustrator – For logos and custom icons.
- Canva – For mockups, assets, and visual elements.

User Research Tools

- Google Forms – For surveys and collecting user requirements.
- Notion / Google Docs – For documenting research findings.
- Observational Interviews – To understand real user needs.

Supporting Tools

- Google Drive – Storing design files and project assets.
- Miro / FigJam – Used for brainstorming and creating user flow diagrams.

5. TECHNOLOGY / DESIGN STACK

5.1 Primary Tools:

Figma

- Used for creating complete UI screens.
- Helps in designing components like: o Buttons o Cards o Navigation bars o Restaurant pages o Cart & Payment screens
- Adobe Illustrator Used for: o Logo creation o Icon designing o Custom illustrations for the app
- Canva
- Used for: o Color palette inspiration o Marketing visuals (optional) o Typography ideas

6. Mobile Application Development

Mobile Application Development is the process of creating software applications that operate on mobile devices such as smartphones and tablets. It involves several stages including planning, user research, UI/UX design, development, testing, and deployment. With the rapid growth of mobile users globally, mobile apps have become essential tools for business operations, education, e-commerce, healthcare, and daily activities.

6.1 Modern mobile application development emphasizes:

- User-Centered Design (UCD)
- Ensuring the app is easy to use, visually attractive, and offers a smooth experience.
- Cross-Platform Compatibility
- Designing interfaces that work on different screen sizes and devices.
- High Performance & Speed
- Ensuring the app loads quickly and responds efficiently.
- Consistency & Branding
- Using proper colors, typography, icons, and components to maintain a professional identity.

In the context of this internship project, Mobile Application Development focused mainly on UI/UX design for a Food Delivery Mobile App. The process involved:

- Conducting user research to understand user needs and problems.
- Creating wireframes and prototypes using Figma.
- Designing key screens such as:
- Splash Screen
- Login & Signup Pages
- Home Screen
- Restaurant Listing Page
- Menu / Food Item Page
- Cart & Payment Screens
- Order Tracking Page
- Profile & Settings
- Maintaining consistency with colors, icons, spacing, and layout alignment.
- Conducting usability testing to ensure the design is intuitive and easy to navigate.

This approach helped develop a visually appealing and user-friendly food delivery application that enhances user experience, reduces navigation difficulty, and supports smooth order placement and tracking.

7. Testing and Validation

Testing and Validation ensure that the developed UI/UX design for the Food Delivery App meets the project objectives, user requirements, and industry standards. The goal is to confirm that the interface is easy to navigate, visually appealing, and functionally intuitive before moving toward development.

A structured testing approach was followed:

7.1 Usability Testing

Usability Testing was performed to evaluate how easily users can interact with the interface. A small group of sample users tested the app prototype to perform tasks such as:

- Logging in or signing up
- Browsing food items
- Adding items to the cart
- Completing the checkout process
- Tracking orders

Observations were recorded to identify areas of confusion, extra steps, or unclear buttons. Based on the feedback, improvements were made to button placements, labels, spacing, and screen clarity.

7.2 Navigation Flow Testing

This test ensured that the movement from one screen to another was smooth, logical, and consistent.
All key flows were validated:

- Login → Home → Restaurants
- Restaurants → Menu → Food Item Details
- Cart → Address → Payment
- Payment → Order Confirmation → Order Tracking

Incorrect links, missing actions, and confusing transitions were corrected.

7.3 Design Consistency Validation

To maintain a professional and clean interface, the following aspects were reviewed:

- Colour palette consistency
- Proper usage of typography

- Icon clarity and alignment
- Spacing and padding
- Button shape and size uniformity
- Image quality and responsiveness

This ensured a unified look across all screens.

7.4 Prototype Testing (Figma)

The final UI was converted into an interactive prototype using Figma. This allowed real-time simulation of user interactions such as taps, scrolls, and screen transitions.

Prototype validation helped detect issues like:

- Misaligned tap targets
- Slow or unclear transitions
- Overlapping elements
- Missing navigation links

All issues were fixed before final submission.

7.5 Peer and Mentor Validation

Feedback was collected from classmates, the internship mentor, and UI/UX trainers. Their suggestions improved:

- Layout structure
- Visual balance
- Order placement clarity
- Checkout and payment flow
- Overall user experience

7.6 Outcome of Testing

After applying all corrections:

- The app became easier to use
- Navigation became smoother
- Screens became visually consistent
- The overall user experience improved significantly

8. Deployment and Demonstration

Deployment and Demonstration are essential steps to present the UI/UX design in an interactive format and to validate how the application would function in real-time scenarios. For this project, the Food Delivery App UI/UX design was deployed digitally using modern prototyping tools and presented to mentors for evaluation. 8.1 Deployment Environment

The complete UI/UX design was deployed using Figma, a cloud-based interface design and prototyping tool.

Deployment included the following steps:

- Organizing all screens into proper navigation flow
- Adding interactive links between buttons and pages
- Creating scrolling frames for long pages (menu, categories, etc.)
- Using transitions and animations for smooth interactions

This allowed the entire app to function like a real mobile application.

8.2 Prototype Hosting and Sharing

The prototype was published online using Figma's "Share Prototype" feature.

The shared link allowed:

- Opening the design on any device (mobile/desktop)
- Real-time testing of all screens
- Interacting with buttons, scrolls, and transitions
- Providing feedback directly in the file

This cloud-based deployment made the app accessible to mentors, peers, and team members without installing any software.

8.3 Demonstration Process

A live demonstration of the Food Delivery App was conducted, covering the full user journey, including:

- User Authentication Flow
  - Login and Sign-Up screens
  - Error-free navigation

 Home Page and Restaurant Browsing

- Food categories
- Restaurant listing
- Search functionality

 Menu and Item Selection

- Viewing item details
- Adding items to cart
- Updating quantities

 Cart and Payment Flow

- Viewing bill summary
- Selecting payment method
- Proceeding to checkout

 Order Tracking Interface

- Tracking the delivery partner
- Viewing order status (Preparing, Picked Up, Delivered)

During the demonstration, the prototype was run in mobile frame mode to showcase the real mobile app experience.

8.4 Feedback and Improvements

After demonstrating the deployed prototype, reviewers provided feedback regarding:

- Button sizes and tap areas
- Colour contrast
- Navigation clarity
- Order summary layout
- Consistency between screens

Based on suggestions, final updates were made to ensure better usability and visual consistency.

8.5 Outcome of Deployment & Demo

- The app worked smoothly as a clickable prototype
- All screens were accessible and interactive
- Reviewers appreciated the clean UI and fast navigation
- The demonstration validated the app's usability, design quality, and user flow

10. CONCLUSION

The Food Delivery App UI/UX project successfully demonstrates the design and development of a modern, user-friendly, and efficient mobile application interface. The primary objective of this project was to create a clean, intuitive, and visually appealing design that enhances the user experience and supports seamless navigation across all major functionalities of a food delivery platform.

Throughout the project, a structured UI/UX process was followed, including user research, wireframing, prototyping, visual design, and interactive testing. Using Figma and other design tools, all essential screens such as Login/Signup, Home, Categories, Restaurant Details, Menu Page, Cart, Payment, and Order Tracking were carefully crafted to ensure consistency, clarity, and ease of use.

The final prototype reflects the core principles of modern application design: simplicity, responsiveness, accessibility, and user satisfaction. It ensures that users can browse food items, add them to the cart, complete payments, and track orders with minimal effort and maximum convenience.

This project not only strengthened technical skills in UI/UX design but also improved understanding of user behaviour, visual hierarchy, layout techniques, and mobile app interaction patterns. The hands-on experience gained during this internship has contributed significantly to professional growth and readiness for realworld design challenges.

Overall, the project meets its intended goal of delivering an aesthetically pleasing, smooth, and efficient UI/UX design for a complete food delivery application, while also laying a strong foundation for future enhancements such as backend integration, real-time tracking, and AI-driven recommendations.

11. FUTURE SCOPE

The Food Delivery App UI/UX project serves as a strong design foundation for a modern, scalable, and userfocused food ordering platform. As industry demands continue to evolve, several enhancements and advanced functionalities can be incorporated to transform this UI/UX prototype into a full-fledged, production-ready system. The following future scope highlights key areas of improvement and long-term development opportunities:

11.1 Backend Development and Cloud Integration

A complete backend system can be implemented using Node.js, Express, or Firebase. Cloud-based solutions such as AWS, Google Cloud, or Azure may be integrated for scalable hosting, database management, serverless functions, and API deployment. This will enable:

- Real-time order processing
- Secure user authentication
- Scalable menu and restaurant management
- Faster data retrieval and load balancing

11.2 Advanced Database Architecture

Future improvements may include designing a robust database structure (MongoDB / PostgreSQL / MySQL) to support:

- User accounts, profiles, and addresses
- Restaurant listings and menu items
- Real-time cart and order data
- Payment records and invoices
- Customer reviews and ratings

Proper indexing, caching, and relational mapping will ensure high performance and reliability.

11.3 Real-Time Order Tracking with Maps Integration

Order tracking can be enhanced with:

- GPS-based delivery partner tracking
- Google Maps or Mapbox integration
- Estimated delivery time (ETA) algorithms
- Real-time status updates (order confirmed, prepared, dispatched, delivered)

This significantly improves transparency and user satisfaction.

11.4 AI-Driven Personalization & Recommendation Engine

Integrating machine learning models can provide:

- Personalized food recommendations
- Dynamic restaurant suggestions based on location, time, and past orders
- Smart predictions for popular items during peak hours
- User retention insights and targeted promotional offers

This feature will enhance user engagement and increase conversions.

11. 5 Secure and Seamless Payment Gateway Integration

The app can be expanded to support multiple payment methods:

- UPI (PhonePe, Google Pay, Paytm)
- Credit/Debit cards
- Net banking
- Wallets
- Cash on Delivery
- EMI/Buy-Now-Pay-Later (BNPL) services

Additionally, implementing PCI-DSS security standards and encrypted transactions ensures secure financial operations.

11.6 Comprehensive Admin & Restaurant Dashboards

Future versions may include dedicated panels for:

Admin Dashboard

- User management
- Restaurant approval & monitoring
- Data analytics and revenue insights
- Order monitoring system

Restaurant Dashboard

- Menu and pricing updates
- Order acceptance and preparation tracking

- Revenue and sales reports
- Coupon and discount management

These dashboards improve efficiency across all stakeholders.

11.7 Push Notifications and Real-Time Alerts

Push notifications can be implemented for:

- Order updates and delivery status
- Offer announcements and discounts
- Personalized alerts based on behavior
- Payment confirmations and receipts This boosts user engagement and retention. 11.8 Enhanced User Experience and Accessibility

Future enhancements can include:

- Dark mode UI
- Voice-based search and ordering
- Accessibility standards (WCAG 2.1)
- Multiple language support for regional users
- Offline browsing capabilities

These improvements welcome a wider and diverse user base.

11.10 Loyalty Programs & Membership Benefits

The platform can introduce:

- Reward points for each purchase
- Subscription models like Swiggy One/Zomato Gold
- Referral bonuses
- Special festival or event-based offers

These increase user activity and long-term engagement.

11.11 Cross-Platform App Development

The UI design can be converted into a fully functional mobile and cross-platform application using:

- React Native
- Flutter

- Ionic
- Kotlin Multiplatform

This will enable smooth performance on both Android and iOS devices with a single codebase.

11.12 Integration with Smart Devices Future expansion can include:

- Smartwatch order notifications
- Voice assistant integration (Google Assistant, Siri, Alexa)
- Smart TV food ordering

These innovations make the platform more accessible and modern.

11.13 Data Analytics & Business Intelligence (BI)

Dashboards can be integrated using Power BI, Tableau, or Looker to analyze:

- Customer behavior
- Order trends
- Revenue forecasting
- Delivery efficiency
- Restaurant performance

This helps businesses make data-driven decisions.
